

## **Clinical Data Management**

Clinical Data Management (CDM) is comprised of three highly integrated programs: Electronic Health Record (EHR) support for BIDCO providers on BID hosted eClinicalWorks (eCW) databases, EHR optimization for quality improvement, and clinical data validation and visualization/reporting. Together they work with pods, practices, providers and practice staff to provide the services below.

The CDM EHR team provides support for BIDCO providers on BID hosted eCW EHRs including version upgrades, new features, achieving meaningful use and Electronic Health Exchange (eHX).

The CDM optimization team (EHR Optimization Specialists) assists primary care providers with improvement of quality scores through expertise in practice workflow, EHRs and quality measures.

The CDM clinical data team assists providers in maximizing the accuracy and completeness of clinical data transfer from certified EHRs to the BIDCO Quality Data Center (QDC) and athena. Additionally, the team provides regular quality measure reporting for pcps, delivered by the optimization team.
